

N-Cast Announces the NWay® Flash® Server at Infocomm 2009

N-Cast NWay Flash Server enables live and archived streaming with Flash® players

Sunnyvale, CA – June 17, 2009 – N-Cast Corporation, the inventors of the Telepresentation technology, today announces the NWay Flash Server, that enables live and archived streaming to Flash players.

The NWay Server is a low-cost, easy-to-install archive server, that complements the capabilities of the Telepresenter®. The NWay Flash Server is the newest product-line in this family suite that provides flash playback capabilities.

Adobe states Flash is available on virtually all Windows platforms, so the NWay Flash Server enables Windows and Macintosh users to view live or archived streams without any special software downloads to their laptops, desktops, iPods, or portables.

Underlying N-Cast's implementation is the Telepresenter M4's high performance H.264 encoder. H.264 is the emerging industry standard for Internet streaming and webcasting. The Telepresenter M4 encodes presentation content for use with the NWay Server.

If you have any questions, please call 408-541-9230 and ask to speak to a salesperson. Please visit us at InfoComm 2009, booth 4671, or please go to www.ncast.com.

About N-Cast:

N-Cast Corporation provides industry-leading solutions for the capture, distribution, and archiving of high-resolution, mixed-media content such as rich-media presentations or annotated high-resolution graphics. N-Cast's 4th-generation Telepresenter™ M4 simplifies the mixing of audio, high definition (HD) video, and any high resolution RGB/DVI source, with PIP capability, into one rich-media file for webcasting or playback. The Telepresenter™ is used in applications such as presentation capture, live and on-demand training, telemedicine, distance learning, and podcasting.
