

## **NCast Introduces Presentation Recorder Series At InfoComm 2010**

### ***NCast makes Hi-Def Streaming and Recording Affordable***

Sunnyvale, CA – June 1<sup>st</sup>, 2010 – NCast Corporation, the inventors of the Telepresentation technology, will be introducing a new family of products called Presentation Recorders at InfoComm 2010.

The Presentation Recorder lineup includes five models of Hi-Def (720p) recorders and streamers that combine video and graphics capture with synchronized audio to allow customers to webcast and preserve for later playback company presentations, meetings, conferences, training sessions and classroom lectures.

The compact size and low-power characteristics of the Podium unit allows for mounting directly in a podium. The second unit in this series mounts in an equipment rack (1U size). A dual-encoder model allows transmission to a dual-screen display, typically a hi-def video camera shot of the instructor or classroom and a wide-screen graphics presentation. A desktop unit is available for conference rooms and mobile carts. The fifth offering in this comprehensive series is a set-top box for receive-only operations which powers kiosks, signage displays and satellite classroom facilities.

Based on a new hardware architecture, the Presentation Recorder products bring the capabilities of high-resolution H.264 streaming and recording to new market segments, making installation of this equipment affordable for smaller organizations, community colleges, K-12 schools and houses of worship.

Sharing many of the features of the fourth generation Telepresenter M4, a Presentation Recorder can completely automate the recording and delivery of content for web-based distribution.

If you have any questions, please call 408-541-9230 and ask to speak to a salesperson. Please visit us at InfoComm 2010, booth N2121, or please go to [www.ncast.com](http://www.ncast.com).

#### **About NCast:**

NCast Corporation provides industry-leading solutions for the capture, distribution, and archiving of high-resolution, mixed-media content such as rich-media presentations or annotated high-resolution graphics. NCast's 4th-generation Telepresenter™ M4 simplifies the mixing of audio, high definition (HD) video, and any high resolution RGB/DVI source, with PIP capability, into one rich-media file for webcasting or playback. The Telepresenter™ is used in applications such as presentation capture, live and on-demand training, telemedicine, distance learning, and podcasting. The Presentation Recorder line sets a new standard for affordable, hi-def H.264 streaming and archiving.
